

CURRICULUM VITAE

Dr. MARIA MONTI

Date and place of birth: 23 June 1973, Naples

Home Address: Via Silio Italico 33, 80124, Naples (Italy)

Work Address: Department of Chemical Sciences, Via Cinthia 4, 80125, Naples (Italy) and

CEINGE Biotecnologie Avanzate, Via G. Salvatore 486, Naples

Office phone numbers: +39 081 3737919 – 674414

Mobile: +39 3407005062

e-mail address: montimar@unina.it

1997: Degree in Chemistry, specialty in Biological Chemistry, University "Federico II" of Naples

1998: Post-graduate fellow at the University "Federico II" of Naples (Department of Cell Pathology and Biology) and CISESMA (CNR) in Naples.

1999 - 2000 Research Assistant at the Parco Scientifico e Tecnologico dell'Area Metropolitana di Napoli, section of Medical Biotechnologies, CEINGE Advanced Biotechnologies.

2000-2003: PhD student in Biochemistry and Molecular Biology at the Department of Organic Chemistry, University "Federico II" of Naples.

2003 Visiting Scientist at the Department of Biomolecular Mass Spectrometry, Utrecht University, The Netherlands.

2004: PhD in Biochemistry and Molecular Biology.

2003-2006: Research Assistant at the CEINGE Advanced Biotechnologies.

2006: Permanent position as Research Assistant at Department of Organic Chemistry and Biochemistry, today Department of Chemical Science, University of Naples "Federico II".

The scientific activity of Dr. Maria Monti has initially concerned the structural characterization of proteins using classical biochemical procedures in combination with mass spectrometry. A strategy based on the combination of limited proteolysis experiments with advanced mass spectrometric methodologies was employed in the conformational investigation of proteins and protein complexes, with a special focus for amyloidogenic proteins involved in aggregation mechanisms.

In the last period, Dr. Monti's scientific activity has been focused on functional proteomics studies addressed to the elucidation of cell processes at molecular level by employing strategies based on both immunoprecipitation and/or affinity purification approaches followed by mass spectrometry analysis for the isolation and identification of multiprotein-complexes. This strategy has been successfully employed for the investigation of molecular mechanisms impaired in several pathological contexts, with specific regards to amyloid diseases and carcinogenesis, by comparing how a specific protein interactome changes, moving from physiological to pathological conditions.

Nowadays, Dr. Monti's research activity is also focused on the investigation of molecular basis of the Huntington's Disease, by studying the role exerted by the metalloproteases ADAM10 in the onset of neurodegeneration.

FUNDED GRANTS

2012: a three years grant, funded by Italian Ministry of Education, University and Research (**PRIN2012**) entitled "A molecular and functional study of ADAM10 at the Huntington's Disease synapse". Role: Responsible of Operative Unit

2012: a three years grant, funded by Ministry of Health for Young Researches entitled "Dissecting the TRIM8 role in the pathogenesis of glioma and therapy". Role: Responsible of Operative Unit

LAST FIVE YEARS PUBLICATIONS
